

Obtain Message Gateway

A single point of entry for all your integrations in Dynamics 365 F&O. It functions as a placeholder for messages entering and exiting, providing insight into troubleshooting, reprocessing, and archiving. It simplifies the development, maintenance, and monitoring of integrations.

Known issues

- Developing integrations is time-consuming.
- Monitoring integrations is fragmented and overwhelming.
- Troubleshooting and management are cumbersome due to numerous integration models.

Save time and resources

- Get unified integrations.
- Save time on developing new integrations.
- Save resources on external tools for downloading and writing files.
- Save time on monitoring, debugging, and troubleshooting integrations.

All integrations are centralized in one place

All the authentication and transport to and from Azure is built into Obtain Message Gateway in the concept of transport handlers. Your integration tasks are therefore reduced to the processing of the data, rather than having to cope with both the transport and the processing.

Integrates both incoming and outgoing messages with Azure Storage, allowing you to import and export messages to Azure.

Does not alter the functionality of standard D365FO, simplifying installation and testing.

Standardizes all your integrations, enabling you to get an overview from a single screen.
